

Weather Station

6 Reference Quality Parameters

Key Features

- Wind Speed & Direction
- Temperature
- Humidity
- Barometric Pressure
- Dew Point
- Rugged, Professional Design

MetPak weather station utilises Gill WindSonic ultrasonic technology, a highly accurate barometric pressure sensor and a Rotronic Hygroclip HC2-S3-GI temperature/humidity probe.

The design of the MetPak allows measurements to be as accurate as possible without influencing other measured parameters yet provides a compact, reference quality system. The unit is especially suitable for harsh or marine environments and is supplied with selectable Gill ASCII, NMEA SDI-12 and Modbus outputs.

Base Station Options Available

MetPak can be configured with a remote wind sensor. See page 3 for all wind sensor options.

Specifications may be subject to change without prior notice.

MetPak integrates industry leading products in a convenient, economical package allowing users to concentrate on the measurement rather than the quality of the measurement. Calibration services available from Gill.

Base Station

MetPak is available as a Base Station which enables the system to be specified with a remote wind sensor if required. This sensor can be positioned away from the Base Station and a connection cable is provided.

The Base Station has been tested in accordance with BSEN 60945 and is suitable for use in marine environments. This system can also be specified without a wind sensor if wind measurement data is not required.

MetPak can be specified with a remote sensor from any of the options shown below:

Wind Sensor Options

WindSonic™

For wind speed and direction measurements to 75 m/s. Corrosion free, polycarbonate housing.

WindSonic™ M

Wind speed and direction measurements to 60 m/s with heating and impact resistant to UL2218 Class 1 & BSEN 60945.

WindObserver™

With enhanced heating and wind measurements up to 90 m/s for extreme conditions.

WindMaster™

Three dimensional wind measurements up to 45 m/s in a lightweight carbon fibre/aluminium construction.

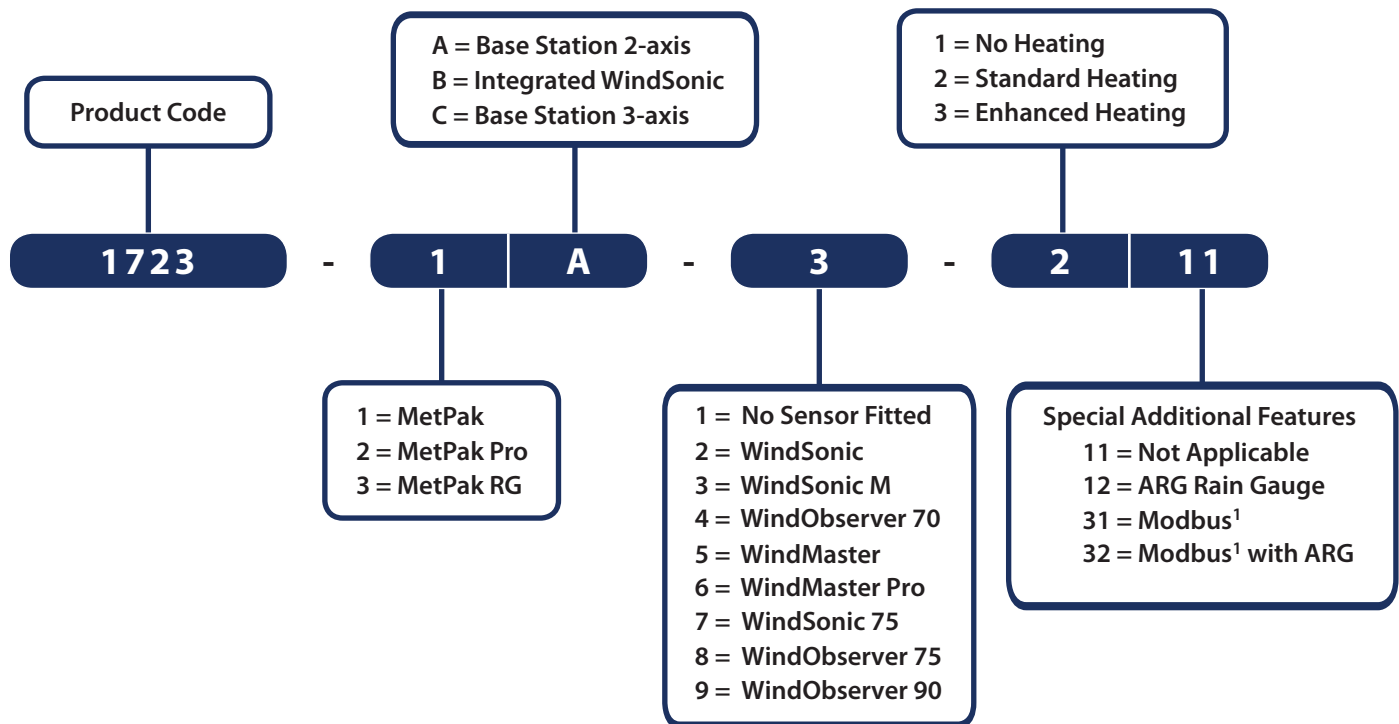

WindMaster™ PRO

Three dimensional wind measurement up to 65 m/s in a stainless steel housing.

Output rate from the wind sensors is controlled by the Base Station.

Product options may be model specific. Consult the Gill sales team for availability

¹ RS232 ASCII for configuration only with Modbus option
